Sustainable Fisheries Management Pacific Salmon

A unique and valuable scientific publication, Sustainable Fisheries Management: Pacific Salmon clearly articulates the current state of the Pacific salmon resource, describes the key features of its management, and provides important guidance on how we can make the transition towards sustainable fisheries.

Sustainable Fisheries Management Pacific Salmon

What has happened to the salmon resource in the Pacific Northwest? Who is responsible and what can be done to reverse the decline in salmon populations? The rapidly falling fish on everyone’s mind - fisherman, resource managers and concerned citizens alike - is the steps necessary to ensure...

New study suggests indigenous practices can help...

Sustainable Fisheries Management Pacific Salmon

Across the North Pacific, salmon fisheries are struggling with climate variability, declining fish populations, and a lack of sustainable fishing. Issues like overfishing and habitat loss are major concerns. The Magnuson-Stevens Fishery Conservation and Management Act (MSA) is the federal law that provides the legal framework for managing fisheries within U.S. waters. The law requires that fishery management plans (FMPs) be developed to ensure that fishery harvest levels are sustainable over the long term.
